

Appendix 1. Species considered but not included in ranking or habitat modeling

1	<i>Lithobates clamitans</i>	green frog	Amphibian
2	<i>Exopalaemon modestus</i>	Siberian prawn	Crustacean
3	<i>Faxonius sanbornii</i>	sanborn crayfish	Crustacean
4	<i>Faxonius virilis</i>	virile crayfish	Crustacean
5	<i>Didymosphenia geminata</i>	Didymo	Diatom
6	<i>Ameiurus melas</i>	black bullhead	Fish
7	<i>Ameiurus natalis</i>	yellow bullhead	Fish
8	<i>Ameiurus nebulosus</i>	brown bullhead	Fish
9	<i>Esox americanus vermiculatus</i>	American pickerel	Fish
10	<i>Esox lucius</i>	northern pike	Fish
11	<i>Lepomis macrochirus</i>	bluegill	Fish
12	<i>Chelydra serpentina</i>	common snapping turtle	Reptile
13	<i>Trachemys scripta elegans</i>	red-eared slider	Reptile
14	<i>Trachemys scripta scripta</i>	yellow-bellied slider	Reptile

Appendix 2. Freshwater Aquatic Invasive Species Assessment

Information for all species included in invasiveness ranking and habitat suitability modeling. For each species, the Alaska occurrence records, occurrence records from outside Alaska, and the species Invasiveness Risk Ranking is reported. The likely pathways are also indicated for each species with a definition and icon for the pathway. Next, a habitat suitability map with three thresholds and species occurrence map is plotted. The shading represents the number of models that predicted suitable habitat across HUC8 subbasins. The habitat suitability models are then organized by HUC4 region and plotted sequentially by HUC number. A map of the HUC4 regions of Alaska is provided for reference. Finally, the habitat suitability model response curves and variable importance for each species is plotted. A summary of relevant pathways relevant to Alaska is presented in the final table.

Any use of trade, firm, or product names is for descriptive purposes only and does not imply endorsement by the U.S. Government.

Freshwater Non-native Species Invasiveness Assessment

Species: *Scientific Name* **Alosa sapidissima** *Common Name* **American Shad**

Alaska Occurrence Records: species occurrences found in Alaska - **26**^{1,2}

Outside Occurrence Records: species occurrences found outside Alaska, United States (other 49 United States and British Columbia, Canada) - **1091**³

Invasiveness Risk Ranking: based upon ASK-IK ranking tool (Very High, High, or Moderate) -**High**⁴

Potential Vectors:

In State Transfer

Natural Migration

Importation and Release

Species Group:

Fish

Lithobates catesbeianus - American bullfrog Habitat Suitability by HUC8 Subbasin

HUC 4 Region Index

Model Criteria Response Curve Matrix

The maps and chart presented on the previous two pages are composite outputs of the five separate habitat suitability models. The matrix of graphs on the next page represents the criteria datasets¹ which are the models' inputs. The criteria graphs are arrayed in descending order of relative importance for each focal species from upper left across top row and then across second and third rows from left to right. The example graph is annotated to explain the details of the matrix

Data Sources: Model Criteria - HydroSheds Hydro Atlas <https://www.hydrosheds.org/page/hydroatlas>

Natural Discharge, Subbasin Surface Runoff, Upstream Lake Volume, Terrain Slope, Wetland Extent
 Lithological (Geology), Soil Organic Carbon, Soil Silt Fraction, Snow Cover Extent, Human Footprint
 Climate – Frost free days

Freshwater Non-native Species Invasiveness Assessment

Species: *Scientific Name* **Micropterus dolomieu** *Common Name* **Smallmouth Bass**

Alaska Occurrence Records: species occurrences found in Alaska - **0**^{1,2}

Outside Occurrence Records: species occurrences found outside Alaska, United States (other 49 United States and British Columbia, Canada) – **3964**³

Invasiveness Risk Ranking: based upon ASK-IK ranking tool - **Very High**⁴

Potential Vectors:

In State Transfer

Species Group:

Fish

Model Criteria Response Curve Matrix

The maps and chart presented on the previous two pages are composite outputs of the five separate habitat suitability models. The matrix of graphs on the next page represents the criteria datasets¹ which are the models' inputs. The criteria graphs are arrayed in descending order of relative importance for each focal species from upper left across top row and then across second and third rows from left to right. The example graph is annotated to explain the details of the matrix

Data Sources: Model Criteria - HydroSheds Hydro Atlas <https://www.hydrosheds.org/page/hydroatlas>

Natural Discharge, Subbasin Surface Runoff, Upstream Lake Volume, Terrain Slope, Wetland Extent
Lithological (Geology), Soil Organic Carbon, Soil Silt Fraction, Snow Cover Extent, Human Footprint
Climate – Frost free days

Freshwater Non-native Species Invasiveness Assessment

Species: *Scientific Name* **Salmo trutta** *Common Name* **Brown Trout**

Alaska Occurrence Records: species occurrences found in Alaska - **0**^{1,2}

Outside Occurrence Records: species occurrences found outside Alaska, United States (other 49 United States and British Columbia, Canada) – **70505**³

Invasiveness Risk Ranking: based upon ASK-IK ranking tool - **Moderate**⁴

Potential Vectors:

Uncertain

Species Group:

Fish

Invasive Vector Summary

Species			Vectors				
Taxon Name	Common Name	Category	In State Transfer	Natural Migration	Stowaway & Contaminant	Importation and Release	Aquarium Release
							
Lithobates catesbeianus	American bullfrog	Amphibian					1
Mysis diluviana	mysid crustacean	Crustacean			1		
Pacifastacus leniusculus	signal crayfish	Crustacean			1		
Alosa sapidissima	American Shad	Fish				1	
Carassius auratus	Goldfish	Fish				1	1
Channa argus	Northern Snakehead	Fish					
Cyprinus carpio	Common Carp	Fish	1				
Esox masquinongy	Muskellunge	Fish	1			1	
Gambusia holbrooki	Eastern Mosquitofish	Fish					
Ictalurus punctatus	Channel catfish	Fish				1	
Lepomis gibbosus	pumpkinseed	Fish					
Micropterus dolomieu	smallmouth bass	Fish	1			1	
Micropterus salmoides	Largemouth bass	Fish	1			1	
Morone americana	white perch	Fish	1				
Notemigonus crysoleucas	golden shiner	Fish					
Perca flavescens	yellow perch	Fish					
Pimephales promelas	fathead minnow	Fish					
Pomoxis nigromaculatus	black crappie	Fish					
Richardsonius balteatus	redside shiner	Fish					

Invasive Vector Summary

Species			Vectors				
Taxon Name	Common Name	Category	In State Transfer	Natural Migration	Stowaway & Contaminant	Importation and Release	Aquarium Release
							
Salmo trutta	brown trout	Fish		1		1	
Salvelinus fontinalis	brook trout	Fish		1		1	
Sander vitreus	walleye	Fish				1	
Tinca tinca	tench	Fish					
Pectinatella magnifica	magnificent bryozoan	Invertebrate					
Corbicula fluminea	Asiatic clam; Asian clam	Mollusk			1		
Dreissena bugensis	quagga mussel	Mollusk			1		
Dreissena polymorpha	zebra mussel	Mollusk			1		
Potamopyrgus antipodarum	New Zealand mud snail	Mollusk			1		

Appendix 3. Cumulative Vulnerability within a HUC8 subbasin.

For each species, habitat suitability is evaluated by 5 different models in binary fashion either a 1 for suitable habitat or a 0 for unsuitable habitat. These scores are generated for each model mapping unit, a square with 4167-meter sides (17.44 square kilometers) and then summed across all five maps. Each mapping unit has a value ranging from 0 (no models predict suitability) to 5 (all models predict suitable habitat).

The cumulative vulnerability is calculated by deriving a mean habitat suitability score for each species by summing all of the mapping unit values within a subbasin and then dividing by the number of map units. Then we added the mean species scores to create a cumulative vulnerability. The maximum cumulative vulnerability score for a subbasin would be 5 (all models predict suitability) x 28 (total # of species) = 140. The mean cumulative vulnerability across all 164 Alaska subbasins was 50.68. Scores ranged from a high of 75.09 (Prince of Wales HUC8 19010103) to a low of 35.52 (Middle Fork Kuskokwim River HUC8 19030407). We plot cumulative invasive vulnerability for all subbasins and for the top 10% of subbasins.

We used the VisTrails Software for Assisted Habitat Modeling (SAHM) software (version 2.2.1; Morissette et al. 2013)

Morissette, JT, CS Jarnevich, TR Holcombe, CB Talbert, D Ignizio, MK Talbert, C Silva, D Koop, A Swanson, & NE Young. 2013. VisTrails SAHM: visualization and workflow management for species habitat modeling. *Ecography* 36:129–135.

Any use of trade, firm, or product names is for descriptive purposes only and does not imply endorsement by the U.S. Government.

Example: Admiralty Island subbasin (HUC8 19010204) displaying four of twenty-eight total species-specific habitat suitability model mean ensemble scores.
